

# AWAE

Anonymous Way to Attend Events

# The Problem

**Some users want to purchase services or such without being identified**

- Services such as events may require our names, emails, and a form of payment
- 

**Data stored with sensitive personal information may not be secured properly**

- Centralized databases are not as secure as decentralized databases
- 

**Some services may be a hassle to register for, requiring too much info**

- Lack of privacy and anonymity
-

# Our Aim

1.

Establishments can create  
and manage events

2.

Data stored on decentralized  
database, only accessible  
through generated keys

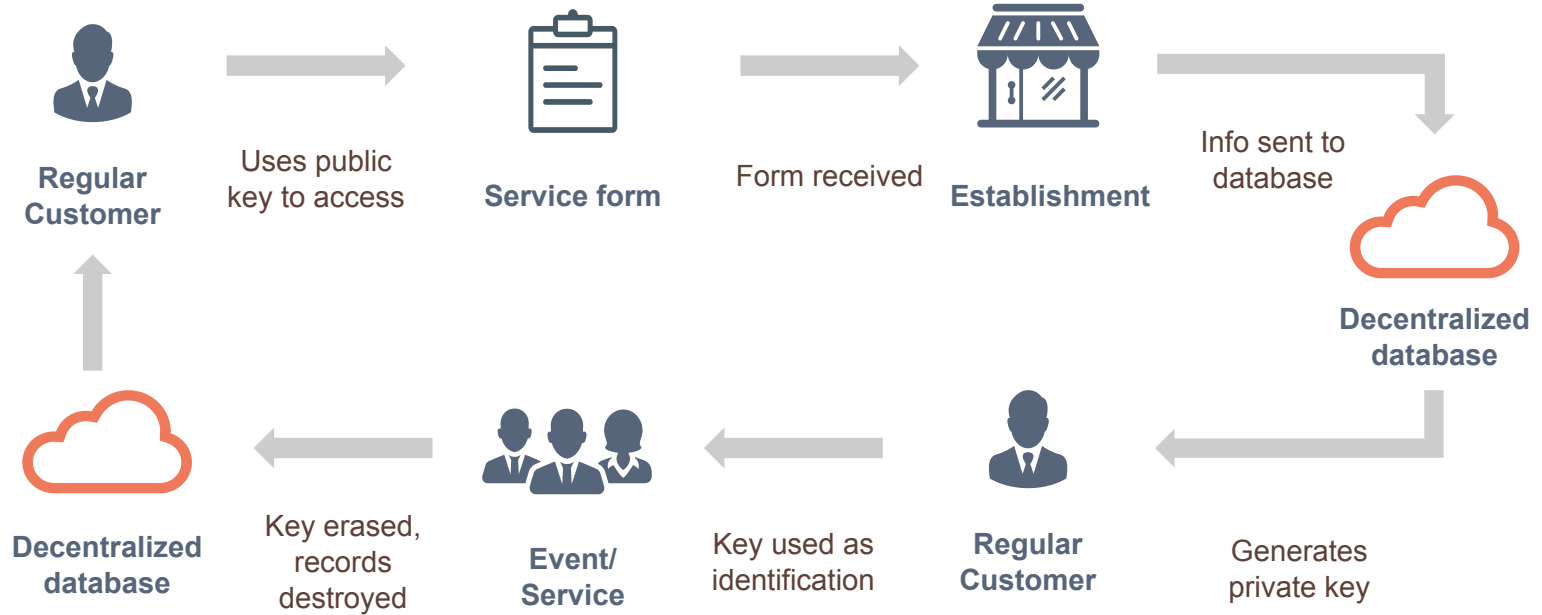

3.

Provide Users anonymity and  
privacy - Records deleted  
after event/service  
completion

# The Solution

# Demo: an overview of the use process

User looks for event/ establishment

Cryptocurrency is used as payment

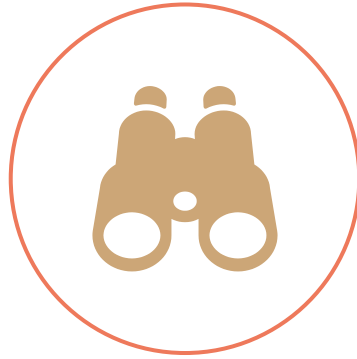

User Remains Anonymous

Private confirmation key is provided to user

Check in to the service for the user using private key

**Here is a Demo**

# Additional Details

Establishment provides public key for use are to access their service forms

Cryptocurrency used as form of payment

Records are mutable

Not restricted to simply events and services

# The Benefits

## Security

Decentralized  
database prevents  
data loss and theft

## Anonymity

Complete privacy -  
No personal  
identification  
required

## Accessibility

Accessible by all  
users and  
establishments -  
Public open source

## Simplicity

Right to the point,  
easy to use with  
minimalistic  
features

**Thanks for Watching**
